Thermostat install guide
Install Guide

For Hive Active Heating™ the thermostat, receiver and hub are installed together so heating and hot water can be controlled remotely.

Installation should only be carried out by a qualified engineer.

Installation order:

For quick and efficient setup install Hive Active Heating™ in the order shown below.

1. Install hub
   - Wait until the hub flashes AMBER

2. Install receiver
   - Wait until the status light flashes AMBER

3. Add thermostat
   - It will show ‘Search’ and then connect

4. Complete online setup
   - On the Hive website or mobile app

1 – The hub

To install the hub, there must be a broadband connection with a spare network port and a power socket must be nearby. Once this has been located, connect the hub as follows:

1. Connect the hub to the household’s broadband router using the network cable provided.
2. Fit the power cable into the hub and plug it into a power socket.
3. Wait for the middle light to flash AMBER. During start-up the GREEN light will flash, followed by the AMBER light. This usually takes 5-10 minutes.
1a – Connecting the hub

Once the AMBER light is flashing, the hub is set up and you can move onto installing the receiver. If no lights are displayed immediately after the hub has been turned on, check all cables are connected and the power socket works. If the problem still persists contact Hive Technical Support.

Hub lights and what they mean

2 – The receiver

Important information before you get started

- Before fitting, isolate the mains electricity supply to the central heating system. Confirm it is isolated and secured in the off position for the duration of the installation. Remember to always follow appropriate safe electrical isolation procedures and test to confirm that the supply is isolated before touching any electrical connections.
- This product should only be installed by an electrically skilled person competent in the installation of electrical accessories. The wiring must comply to the current edition of BS7671 (The IET Wiring Regulations), and the appropriate Building Regulations or Standards in place.
- The Hive receiver is double insulated so doesn’t need an earth connection. You’ll find a tether on the backplate to secure an earth wire if needed.
- This product is designed for fixed wiring installation only. It must be supplied via a switched fused spur with a minimum contact separation of 3mm (both live and neutral) and fitted with a 3A fuse.
Installing the correct receiver
Hive Active Heating™ has two types of receiver:

Single channel receiver
for combi boilers and additional plumbed heating zones

Dual channel receiver
for conventional boilers with hot water cylinders

Wiring labels
Before you start, use the labels provided and attach them to the wires. Taking a photo of the wires can be a handy reminder.
2a – Installing the receiver

You should fit the receiver in a convenient location close to the boiler or central heating system. **Make sure it’s at least 30cm away from large metal objects**, such as a boiler or hot water cylinder, to avoid interference with radio signals. Take care to avoid any cables and pipes that may be buried in the walls. Once you’ve found a suitable location, install the receiver as follows:

1. ![Loosen the screws on the underside of the receiver and remove the backplate by pulling the bottom of it away from the front panel.](image)

2. ![Fix the backplate to the wall with the terminals at the top.](image)

3. ![Run cable from the boiler or wiring centre (if required), then continue on to the next section to wire up the backplate.](image)
2b – Single channel receiver wiring

N: Permanent neutral
L: Permanent live
1: Common
2: Heating off (NC)
3: Heating on (NO)
4: (unused)

2b – Dual channel receiver wiring

N: Permanent neutral
L: Permanent live
1: Common
2: Heating off (NC)
3: Hot water off (NC)
4: Heating on (NO)

2c – Testing the boiler

To test the receiver to boiler connection follow these steps:

1. Visually check the wiring to confirm that the connections have been carried out correctly, referring to the labels on the wires and any photographs taken before replacement began.

2. Confirm that the receiver’s front panel is in place and that it is safe to commission the boiler.

3. Restore power to the central heating system – the receiver’s status light should flash AMBER. This means it’s ready to connect to the hub and thermostat.

4. Test the receiver’s wiring to the heating system by pressing the ‘Central heating’ button. The GREEN light above the ‘Central heating’ button should come on and the boiler should fire up.

Once you’ve completed these tests, leave the receiver switched on with the status light flashing – this means it’s ready to connect to the hub and thermostat. Next, install the thermostat.
Important information: Replacing existing controls

If there’s an existing single zone timer or wireless receiver, you should replace it with the Hive receiver. Hive receivers are backplate compatible with a number of common boiler controls that may already be fitted in the home.

If the existing controller doesn’t have a compatible backplate, remove it completely and wire in the Hive receiver in its place. If needed you can use a stand-off plate (SP, supplied separately) to create space to accommodate existing wiring, or use a decoration plate (DP) when replacing a larger controller.

If the existing controller does have a compatible backplate, simply remove the front panel of the existing controller and snap the Hive receiver front panel on in its place.

- **Single channel receiver compatibility:** WR1 receiver, UT2 and EMT2 timers
- **Dual channel receiver compatibility:** UP2 and EMP2 programmers

Important information: Replacing an existing thermostat

If you’re replacing an existing wired thermostat, you should ensure that the pre-existing wires and connections are made safe. This can be achieved by disconnecting or bridging out the wired thermostat in the wiring centre or boiler. Where cables are left at the wireless thermostat position, they should be housed and terminated within an enclosure to prevent access. If you’re replacing an existing wireless thermostat, decommission it by detaching it from the wall and removing its batteries.

Important information: Gravity-fed and part-pumped systems

Gravity-fed and part-pumped systems are wired differently to standard boilers. With these, the hot water relay switches on the boiler, whilst the heating relay opens a valve, operates a pump, or both, to divert hot water to the heating.

If you are installing into a gravity-fed or part pumped system, complete the wiring and then switch the Hive receiver to ‘gravity-fed’ mode as follows:

1. Switch off the power to the boiler and receiver.
2. Wait at least 5 seconds, then switch the boiler and receiver back on.
3. Press and hold the hot water button for at least 10 seconds.

The receiver status light will flash BLUE for 3 seconds when entering ‘gravity-fed’ mode. Or GREEN for ‘fully pumped’ mode. Fully pumped mode is the default for new devices.
Important information: Multizone receiver installation

If you’re installing Hive Multizone, you’ll need to install all the receivers before proceeding to the next step.

Note: Hive Multizone can support up to three heating zones and one hot water zone. Each Multizone installation should include a maximum of:

✅ Three single channel receivers

or

✅ One dual channel and two single channel receivers

When installing a dual channel receiver, please ask the customer where in the home they would like to control their hot water. The chosen central heating zone will need to be wired into the dual channel receiver.

Hot tips:
- See page 12 (section 2c) on how to confirm receivers are installed and operating the heating system correctly.
- Label the receivers once you have installed them so that it’s clear which receiver controls which zone.
- See page 29 on how to set-up Multizone.
Important information: Stand-alone installation

For Hive Active Heating™ a hub, a receiver and a thermostat are installed. When this service hasn’t been bought, the thermostat and receiver can also be installed without a hub. This is known as ‘stand-alone’ mode.

Follow the steps in the next section if the thermostat and receiver are going to be installed without a hub in ‘stand-alone’ mode (where Hive Active Heating™ hasn’t been purchased).

In ‘stand-alone’ mode the thermostat acts as a standard wireless programmable thermostat without the remote heating control features and functionality of Hive Active Heating™.

Activating stand-alone mode

1. Remove the batteries from the thermostat.
2. Switch off the boiler and receiver.
3. Wait at least 5 seconds, then turn the boiler and receiver back on. The receiver’s status light will begin to flash AMBER.
4. Press and hold the heating button for at least 10 seconds – until the status light begins to flash WHITE. The receiver is now in ‘stand-alone’ mode and is searching for a thermostat.
5. Insert the batteries into the thermostat, press and hold down the menu and back buttons on the thermostat and follow the factory reset instructions on screen. After about 10 seconds, ‘Welcome’ and ‘Searching…’ will be displayed on screen. If the thermostat shows ‘REJOIN’ then try steps 1 and 5 again.
To switch back to ‘remote heating’ mode:

a. Switch the hub off and then on again. If it begins to flash AMBER continue on to step b. If all the lights go out and the hub does not flash AMBER, log into hivehome.com, open the ‘Devices’ page and click ‘Add devices’. The hub should now begin to flash AMBER.

b. Now follow steps 1-5 on page 18, but note that the lights will be different. At step 3 the receiver’s status light will initially flash WHITE/PINK and in step 4 it will change to AMBER (for ‘remote heating’) once you have held the ‘Central heating’ button down.

At any time you can check what mode the receiver is set to by switching it off then on. When power is restored the status light will flash for 5 seconds – AMBER for Hive Active Heating™, WHITE for ‘stand-alone’ mode.

Receiver lights and what they mean

The receiver has lights on its front panel to show what it’s doing. A single channel receiver has two lights – ‘Status’ and ‘Central heating’. A dual channel receiver has an additional light for ‘Hot water’. This is what the lights mean:

<table>
<thead>
<tr>
<th>Light</th>
<th>Colour</th>
<th>Pattern</th>
<th>Meaning</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Central heating</td>
<td>GREEN</td>
<td>Solid</td>
<td>Heating is on.</td>
<td></td>
</tr>
<tr>
<td>Central heating</td>
<td>GREEN</td>
<td>Flashing</td>
<td>Commands queued. The receiver has received 2 or more commands to switch the boiler on or off within 1 minute. Or, Heating Boost mode with target temperature lower than room temperature.</td>
<td>The Hive receiver protects the boiler from damage that may occur if it’s switched on and off very quickly. Once the boiler has been switched on (or off), it will not change state again for 1 minute as a protective measure.</td>
</tr>
<tr>
<td>Hot water</td>
<td>GREEN</td>
<td>Solid</td>
<td>Hot water is on.</td>
<td>This light is only present on dual channel receivers.</td>
</tr>
<tr>
<td>Hot water</td>
<td>GREEN</td>
<td>Flashing</td>
<td>Commands queued. The receiver has received 2 or more commands to switch the boiler on or off within 1 minute.</td>
<td>See ‘Central heating’.</td>
</tr>
<tr>
<td>Status</td>
<td>GREEN</td>
<td>Solid</td>
<td>Normal operation. The receiver is connected to the rest of the Hive system and operating normally.</td>
<td></td>
</tr>

<td>BLUE</td>
<td>Solid</td>
<td>The system is in <strong>gravity-fed mode</strong> and is connected to the rest of the Hive system.</td>
<td>See gravity-fed mode section of this manual on page 14.</td>
</tr>
<tr>
<td>Status</td>
<td>AMBER</td>
<td>Flashing</td>
<td><strong>Installation.</strong> The receiver is trying to connect to other Hive devices.</td>
<td>The receiver will search for devices for 40 minutes at a time.</td>
</tr>
<tr>
<td>Status</td>
<td>WHITE</td>
<td>Flashing</td>
<td>The receiver is in <strong>stand-alone mode</strong> and is actively seeking to connect to a Hive thermostat.</td>
<td>The receiver will search for a thermostat for 40 minutes. If no thermostat is found within this time it will stop searching and the status light will turn solid WHITE.</td>
</tr>
<tr>
<td>Status</td>
<td>AMBER or WHITE</td>
<td>Solid</td>
<td><strong>Installation.</strong> The receiver has paused its search for other devices.</td>
<td>To restart the search, simply turn the receiver off and then on. This will return it to the AMBER or WHITE flashing state.</td>
</tr>
<tr>
<td>Status</td>
<td>RED</td>
<td>Solid</td>
<td><strong>Error.</strong> The receiver has lost its wireless connection to the thermostat.</td>
<td>Whilst in this state heating and hot water will default to off. They can be switched on manually by pressing the ‘heating’ and ‘hot water’ buttons on the receiver (hot water only available on dual channel receivers). For help call Hive Technical Support.</td>
</tr>
</tbody>
</table>

---

**3 – The thermostat**

For the thermostat to work accurately, it’s important that you install it in the right location.
3a – Selecting a location for the thermostat

The thermostat should be fixed to an internal wall, 1.5m from the floor and away from heat sources that could affect its operation, such as radiators and areas in direct sunlight. To make accurate temperature readings, the thermostat needs a free flow of air, so make sure it’s installed in an area not covered by curtains or similar objects.

The thermostat should not be installed in the same room as a radiator that’s controlled by a thermostatic radiator valve (TRV). Installing the two in the same room may result in the central heating being permanently on.

3b – Wall mounting the thermostat

Remove the backplate of the thermostat by pressing the lever at the bottom and pulling away from the front of the device.

Once you’ve found a suitable location, fix the backplate to the wall using the appropriate fixings. The backplate is designed for 3.5mm/size 6 or size 8 screws. Be careful to avoid any cables and pipes that may be buried in the wall.

Note: the backplate is designed to mount directly onto a single gang back box, if available.
3c – Confirming the hub is ready to connect

Before inserting the batteries into the thermostat, check the hub is flashing AMBER – this means it’s ready to connect. If it is showing a solid AMBER light, turn it off then on, and then switch the receiver and boiler off and then on again too. The hub should then begin to flash AMBER and be ready to connect.

3d – Inserting the batteries and connecting to the hub and receiver

The battery compartment is located at the back of the thermostat and is only accessible when the front of the thermostat is removed from the backplate.

Insert the 4 AA batteries provided.
If you are installing Hive Multizone only insert batteries into one thermostat at a time.

The thermostat display will show ‘Search’ – meaning it’s searching for the hub and receiver. A timer will show how long the thermostat has been searching. If this lasts for longer than five minutes contact Hive Technical Support and they will diagnose any problems.
The receiver will display a solid GREEN status light or a BLUE light if it’s in gravity-fed mode.

If installing Hive Multizone the status light will go GREEN on one receiver only. This is correct as the batteries should only be inserted into one thermostat at a time.

The thermostat will then go onto the ‘Welcome’ pages and a solid GREEN light will appear on the hub.

3e – Final steps

Installation is almost complete. All that’s left to do is:

1. Hook the thermostat onto the backplate and click it in place.
2. Remove the screen protector from the front of the thermostat.
3. Confirm the system is properly configured by checking:
   - The thermostat is displaying room temperature.
   - The receiver’s status light is solid GREEN or solid BLUE.
   - The hub has solid GREEN lights.

If the system is not properly configured it will not be possible to complete online setup.
4 – Multizone

Important note:

Hive Multizone is not compatible with Nano 1 hubs.

Adding additional heating zones
If you’ve not done so already, install all additional receivers and power them up. For new receivers, their status lights should be double flashing AMBER. Please see page 15 for more information on receiver installation.

To complete installation of the remaining heating zone(s) use either the hub or the Hive app or online dashboard:

1 – Using the hub

1. Press the button at the rear of the hub for 1 second and release it. The middle LED should start to flash AMBER.
2. Now add the batteries to one new thermostat.
3. Wait until the thermostat display stops showing ‘Search’. Now check that the status light on one of the receivers that was previously flashing AMBER has turned solid GREEN.
4. If there are still more zones to install, repeat steps 2-3.
5. When all zones have been added, press the button on the rear of the hub to exit from pairing mode. The middle LED will stop flashing.
2 – Using the Hive app or online dashboard

1. Download the Hive app or go to hivehome.com

2. Log in using the account details supplied in the order confirmation email.

3. If prompted to do so, enter the hub ID – this is found on the underside of the hub, for example ABC-123.

4. Select menu or settings and expand the heating (and hot water) section.

5. Select ‘Install Devices’ and follow the on-screen instructions.

Hot tip:
- Once installed, the default zone name can be changed by selecting ‘Manage Devices’ in the Hive app or online dashboard.
- Once all the thermostats and receivers are paired, fit the correct thermostat on the wall in each zone.
- Check all thermostats remain in range once mounted in their final locations, adding a Signal Booster if required.
5 – Online account setup

Hive Active Heating™ is now installed and ready to be registered. There are two ways to complete online setup:

Set up using a web browser

1. Go to hivehome.com
2. Log in using the account details supplied in the order confirmation email.
3. Enter the hub ID – this is the ABC-123 formatted number on the underside of the hub.
4. Once the hub ID has been entered, setup is complete and Hive Active Heating™ is ready to use.

Set up using the smartphone app

1. Download the Hive app.
2. Log into the app using the account details supplied in the order confirmation email.
3. Enter the hub ID – this is the ABC-123 formatted number on the underside of the hub.
4. Once the hub ID has been entered, setup is complete and Hive Active Heating™ is ready to use.
